

## **Millborn's Boulevard Turf Mix**

### **Description**

Millborn's Boulevard Turf Mix handles the harsh conditions faced by boulevards. It has excellent tolerance to winter road salt residue and dry, hot conditions.

### **Uses**

Great for seeding salty/saline areas.

### **When to Plant**

Spring: April - June  
Fall: August – Early September  
Dormant: November – Freeze Up

### **Recommended Seeding Rate**

7 lbs/1,000 sq ft

### **Components**

20% Kentucky Bluegrass  
20% Fine-Leaf Perennial Ryegrass  
20% Creeping Red Fescue  
20% Salty Alkaligrass  
20% Chewings Fescue

### **Availability**

5 lb bags  
25 lb bags

### **Seeding Guidelines**

- It is desirable to have at least 6" of black topsoil.
- If weeds are a problem, apply a glyphosate herbicide (Roundup®) and allow weeds to burn down for at least 7 days.
- Remove rocks and other debris. Till the top 4"-6" of soil. Add compost or additional soil at this time. Till one more time.
- Firm up the seedbed by dragging and/or roll packing. When walked on, you should not sink more than 1".
- For spring seedings, it's best to plant from April through early June. For fall seedings, plant between late August and early September.
- Seed with a special grass drill.
- Apply 24-5-10 Fertilizer 50% SCU with Prospect® at 150 lbs per acre.

### **Specifications**

- Minimum Purity 97% and Minimum Germination 85%
- Maximum Other Crop Content .10% and Maximum Weed Content .10%
- No U.G.S. (Reference U.G.S. specification)
- Components and/or percentages of the above blend may vary
- Revision 4—01/19/12
