

Millborn's Drought Buster Turf Mixture

Description

Millborn's Drought Buster Turf Mix was designed to handle the harsh conditions of the prairie, while providing an attractive low maintenance turf.

Uses

Perfect for new and renovated low maintenance turf areas.

When to Plant

Spring: April - May
Fall: August
Dormant: November – Freeze Up

Recommended Seeding Rate

30-60 lbs/acre

Components

30% Blue Grama 'Bad River'
30 % Streambank Wheatgrass 'Sodar'
20 % Canby Bluegrass 'Canbar'
10 % Buffalograss 'Bowie or Cody'
10 % Prairie Junegrass 'VNS'

Availability

Any Amount

Seeding Guidelines

- It is desirable to have at least 6" of black topsoil.
- If weeds are a problem, apply a glyphosate herbicide (Roundup®) and allow weeds to burn down for at least 7 days.
- Remove rocks and other debris. Till the top 4"-6" of soil. Add compost or additional soil at this time. Till one more time.
- Firm up the seedbed by dragging and/or roll packing. When walked on, you should not sink more than 1".
- For spring seedings, it's best to plant from April through early June. For fall seedings, plant between late August and early September.
- Seed with a special grass drill.
- Apply 24-5-10 Fertilizer 50% SCU with Prospect® at 150 lbs per acre.

Specifications

- Minimum Purity 97% and Minimum Germination 85%
- Maximum Other Crop Content .10% and Maximum Weed Content .10%
- No U.G.S. (Reference U.G.S. specification)
- Components and/or percentages of the above blend may vary
- Revision 1—01/19/12
