

Millborn's Fine Fescue Turf Mix

Description

Millborn's Fine Fescue Turf Mix requires less water and fertilizer than traditional turf blends, while still handling moderate traffic.

Uses

Great for seeding in areas that may experience drought or areas that have watering restrictions.

When to Plant

Spring: April - June
Fall: August – Early September
Dormant: November – Freeze Up

Recommended Seeding Rate

7 lbs/1,000 sq ft

Components

20% Kentucky Bluegrass
20% Creeping Red Fescue
25% Hard Fescue
35% Chewings Fescue

Availability

25 lb bags

Seeding Guidelines

- It is desirable to have at least 6" of black topsoil.
- If weeds are a problem, apply a glyphosate herbicide (Roundup®) and allow weeds to burn down for at least 7 days.
- Remove rocks and other debris. Till the top 4"-6" of soil. Add compost or additional soil at this time. Till one more time.
- Firm up the seedbed by dragging and/or roll packing. When walked on, you should not sink more than 1".
- For spring seedings, it's best to plant from April through early June. For fall seedings, plant between late August and early September.
- Seed with a special grass drill.
- Apply 24-5-10 Fertilizer 50% SCU with Prospect® at 150 lbs per acre.

Specifications

- Minimum Purity 97% and Minimum Germination 85%
- Maximum Other Crop Content .10% and Maximum Weed Content .10%
- No U.G.S. (Reference U.G.S. specification)
- Components and/or percentages of the above blend may vary
- Revision 3—01/19/12
