

Millborn's Tough Play Turf Mix

Description

Millborn's Tough Play Turf Mix is a durable, drought-tolerant, rapidly establishing mix.

Uses

Great as an alternative to traditional bluegrass based turf mixtures.

When to Plant

Spring: April - June
Fall: August – Early September
Dormant: November – Freeze Up

Recommended Seeding Rate

9 lbs/1,000 sq ft

Components

90% Turf Type Tall Fescue (minimum 3 varieties)
10% Kentucky Bluegrass

Availability

25 lb bags

Seeding Guidelines

- It is desirable to have at least 6" of black topsoil.
- If weeds are a problem, apply a glyphosate herbicide (Roundup®) and allow weeds to burn down for at least 7 days.
- Remove rocks and other debris. Till the top 4"-6" of soil. Add compost or additional soil at this time. Till one more time.
- Firm up the seedbed by dragging and/or roll packing. When walked on, you should not sink more than 1".
- For spring seedings, it's best to plant from April through early June. For fall seedings, plant between late August and early September.
- Seed with a special grass drill.
- Apply 24-5-10 Fertilizer 50% SCU with Prospect® at 150 lbs per acre.

Specifications

- Minimum Purity 97% and Minimum Germination 85%
- Maximum Other Crop Content .10% and Maximum Weed Content .10%
- No U.G.S. (Reference U.G.S. specification)
- Components and/or percentages of the above blend may vary
- Revision 4—01/19/12
