Uses

Great for seeding new turf areas.

When to Plant

Spring: April - June

Fall: August - Early September

Dormant: November - Freeze Up

Recommended Seeding Rate

6 lbs/1,000 sq ft

Components

40% Kentucky Bluegrass

30% Fine-Leaf Perennial Ryegrass

30% Creeping Red Fescue

Scientific Name

Poa pratensis

Lolium perenne

Festuca rubra var. rubra

Availability

25 lb bags

5 lb bags

Seeding Guidelines

- It is desirable to have at least 6" of black topsoil.
- If weeds are a problem, apply a glyphosate herbicide (Roundup®) and allow weeds to burn down for at least 7 days.
- Remove rocks and other debris. Till the top 4"-6" of soil. Add compost or additional soil at this time. Till one more time.
- Firm up the seedbed by dragging and/or roll packing. When walked on, you should not sink more than 1".
- For spring seedings, it's best to plant from April through early June. For fall seedings, plant between late August and early September
- Seed with special grass drill or broadcast spreader.
- Apply Sustane© 4-6-4 all-natural slow release fertilizer at 10lbs per 1,000 sf or equivalent product and rate.

Specifications

- Minimum Purity 97% and Minimum Germination 85%
- Maximum Other Crop Content .10% and Maximum Weed Content .10%
- Components and/or percentages of the above blend may vary
- Revision 4 - 02/14/14
