

4 Step Fertilizer Guide

Fertilizing your lawn should be simple. So we made it that way;-)

1. Crabgrass Preventer | 18-0-6 with Dimension®

Application Dates: **Early April to Early May**

Apply when soil temperature reaches 50-52 degrees

Typically a time when lilacs are starting to bloom

Helps prevent crabgrass and other annual grasses from invading your lawn

Promotes spring growth of lawns

EARLY
APRIL

EARLY
MAY

2. Weed & Feed | 22-0-5 with Trimec®

Application Dates: **4-6 weeks after Step 1**

Apply when blades of grass are wet for best control

Early morning is the best time to apply (dew on blades)

Provides control of broadleaf weeds

EARLY
MAY

MID
JUNE

3. Turf Food | 24-5-10 OR 29-0-3

Application Dates: 6-8 weeks after Step 2

Slow release nitrogen feeding for the long summer months

Provides excellent greening effect on the lawn

Provides enough nutrients for 10 to 12 weeks

Works best when watered in lightly

MID
JUNE

EARLY
AUG

4. Starter/Winterizer | 13-13-13

Application Dates: **10-12 weeks after Step 3**

Apply to promote root growth which will thicken turf the following spring

Puts your lawn in tip top condition going into the long winter months

EARLY
SEPT

MID
NOV
