

NATIVE MIXES

# TECH SHEET

## BIG COUNTRY

- Year-round wildlife habitat
- Great for all native grassland applications

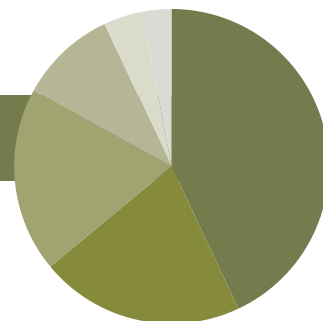

This predominantly warm season grass mix will grow well in most soil conditions and will reach 4'-6' tall at full maturity. The diversity of this mix creates the structure to provide visual appeal and wildlife habitat year-round. Big Country is an excellent choice for all native grassland applications although it does not meet the requirements of most conservation programs.

### MIX RATIO

- 43% Switchgrass
- 21% Big Bluestem
- 19% Indiangrass
- 10% Sideoats Grama
- 4% Slender Wheatgrass
- 3% Canada Wildrye

\*These amounts are based on percentage of population  
Comparable substitutions may be necessary depending on species availability

**Specialist Establishment Tip:** In all native mixes, you often won't see a mature species during the first season. Weed management and upkeep should be the number one priority during the first year. To give this mix a boost a reduce erosion during establishment, we added QuickGard Sterile Triticale to the mix.

### AGRONOMICS

Seeding Rate	15 lbs/acre
Seed per sq. ft.	45.7
Seeding Instructions	<ul style="list-style-type: none"><li>• If broadcasting seed, multiply the seeding rate times 1.5</li><li>• If used in a commercial application, multiply the seeding rate times 2</li></ul>
