

SOLAR MIXES

TECH SHEET

TEMPORARY COVER

When you need temporary growth on your site to prevent erosion, build soil structure, and give your future solar farm a beautiful look, Temporary Cover is for you. This blend of Red, White, and Crimson Clovers will establish quickly and flower within 40 days after planting. The Annual Ryegrass will create quick groundcover to hold your soil and suppress weeds. When your site isn't quite set to plant to your perennial mix, get Temporary Cover to improve your site's appearance and chances for a successful perennial stand.

MIX RATIO

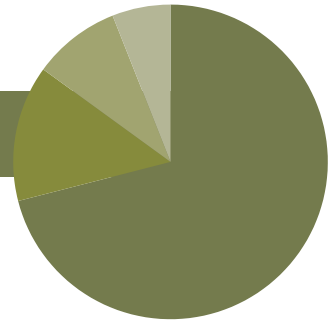

71% Annual Ryegrass (25 lbs/acre)

14% Crimson Clover (5 lbs/acre)

9% Medium Red Clover (3 lbs/acre)

6% White Dutch Clover (2 lbs/acre)

*These amounts are based on percentage of population
Comparable substitutions may be necessary depending on species availability

AGRONOMICS

Seeding Depth	1/4-1/2 inch
Total Seeding Rate	35 lbs/acre
Seeding Instructions	Drill into a firm, clean seed bed
