## BUTTERFLY MILKWEED

Butterfly Milkweed is a perennial forb that thrives in sandy, loamy and rocky soils in open prairies and other open areas. It grows bowl-shaped flowers that range from red to orange in color. Butterfly Milkweed not only beautifies a landscape but also provides essential habitat to migrating butterflies.

### AGRONOMICS

Light Requirements	Full
Bloom Period	June-August
Bloom Color	Orange
Mature Height	2 feet
Soil Moisture	Medium to Dry
Seeding Rate	15-20 lbs/acre
Package	1 lb, 5 lb
Planting Instructions	Site preparation is vital for allowing your seed to make clean contact with the soil, allowing for successful and uniform germination. Start with a clean, firm, weed-free seedbed to allow for uniform seed placement and an increased chance for faster establishment.
