TECH SHEET

CREEPING ALFALFA

Creeping alfalfa expresses a creeping root rather than a taproot like other alfalfas. This makes it an excellent fit in new pasture seedings with grass, or as a reliable legume to interseed into the existing pasture. Creeping alfalfas are tolerant to grazing and have a high level of winterhardiness as well as drought tolerance.

AGRONOMICS

Planting Time	Spring, Late Summer/Early Fall, or Frost Seeding
Seeding Rate	Full Seeding Rate: 15 lbs/acre Interseeding into Existing Grass: 3-5 lbs/acre
Seeding Depth	1/2 inch
Package	50 lb bag
