TECH SHEET

SORGHUM X SUDANGRASS HYBRID (CONVENTIONAL)

Sorghum Sudangrass is a warm-season annual grass developed as a hybrid cross between forage sorghum and sudangrass. It is commonly used as a versatile forage option for grazing, hay, or silage. MS 9000 displays rapid growth and can reach heights of 6-8' tall at maturity. Unlike forage sorghum, sorghum x sudangrass hybrids will regrow the following harvest by cutting or grazing. Sorghum x Sudangrass is very drought tolerant and will grow well during the heat of the summer under limited moisture conditions. It is used throughout the U.S. and can be productive in northern environments that have a short growing season. It will do best on well-drained soil and does not tolerate flooding or standing water. MS 9000 is a high performing, economical sorghum x sudangrass hybrid with excellent yield potential.

AGRONOMICS

Planting Time	Late Spring-Early Summer
Drilled Seeding Rate	15-20 lbs/acre
Seeding Depth	3/4-1 inch
Package	50 lb bag, 2,500 lb tote
