

SINGLE SPECIES

TECH SHEET

WHITE CLOVER

White Clover is highly palatable and nutritious for all classes of livestock. Commonly planted with orchardgrass, ryegrass, or tall fescue, white clover is the most important pasture legume. White clover is a choice food for deer and elk, and grass seedings benefit from the produced nitrogen. It thrives best in a cool, moist climate.

AGRONOMICS

PLS Seeding Rate	5
Bloom Period	June to July
Bloom Color	White
Vegetative Height	4-8 inches
Package	1 lb bag
