WILD RICE

Wild Rice is a preferred food source for migratory birds and fits a food plot need for duck and goose hunters. This water loving annual grass will produce grain while thriving in marshes and wetlands. Wild Rice needs very clean, calm, and cold water to grow that is 6-18 inches deep. It should be seeded dormant or in the spring, and prior to planting the seed needs to be soaked for 48 hours.

AGRONOMICS

Seeding Rate	50 lbs/acre
Seeding Depth	Broadcasted: 6-18 inches, into water Drilled: 1 inch, then flood the field
Package	50 lbs
